HUMANE TYPE

a type tool by Beetroot design group

www.beetroot.gr

Installation

Open script panel in Indesign (or press Ctrl+Alt+F11)

Right click on the "User" folder and choose
"Reveal in Explorer/Finder"

Copy the contents of the "Humane Type" folder
inside the "Scripts Panel" folder

Go back to inDesign and double click on the
Humane_Type.jsx that should appear now in your
scripts panel under the "User" folder

Play away :)

Notes on use

The body text function works only on text frames
while the title function works both on frames and selections.

The body function cannot process multiple frame selections.
In case of threaded text, you can work around that by
processing each frame in the order from first to last.
